SUMMARY

Computer Science student focusing on backend development and secure system design. I have experience building REST APIs, authentication systems, and database-driven apps using Django and Flask.

I am interested in creating systems that can grow and are easy to manage. I focus on clean architecture, efficient data handling, and secure application design.

EDUCATION

B.Tech in Computer Science and Engineering (Cybersecurity Specialization)

Indian Institute of Information Technology, Kottayam (IIITK)

2025 – Present

◆ Relevant Coursework: Data Structures, Operating Systems, Computer Networks, Database Systems, Cybersecurity Fundamentals

CERTIFICATIONS

- **DEF CON Srinagar 0x0** — Ethical Hacking (Credential ID: 1e397d29-1f9d-424c-80a5-9b879c503527)
- **Ethical Hacking & Cybersecurity** — IIT Delhi (World Technocon)
- **MITRE ATT&CK Framework** — Cybrary (Credential ID: CC-9321d910-9b0c-4813-b3ef-7c7ea6859c95)
- **OSINT** — Cybrary (Credential ID: CC-4ec3ce3d-4635-467a-b04c-61bb7f9037e4)
- **Microsoft Office Certification** — UNICEF YuWaah

PROJECTS

Revolution Classes LMS Platform

Developed and deployed a full-stack Learning Management System (LMS) for managing students, teachers, courses, assessments, and educational resources.

- Built REST APIs using Django REST Framework with role-based access control for students, teachers, and administrators.
- Developed a Flutter mobile application supporting course access, doubt resolution, assessments, and learning resources.
- Implemented question bank management, bulk question import, test generation, enrollment workflows, and teacher assignment modules.
- Deployed the platform on AWS EC2 using PostgreSQL, Gunicorn, and Nginx, with automated database backup and operational monitoring.

Safenex Firewall (In Development)

Developed a backend-driven system with a centralized dashboard to monitor system activity and manage users.

- Implemented user authentication and role-based access control.
- Designed APIs for real-time logging and alert notifications.
- Built backend logic for managing multiple users.

DeepShield — Deepfake Detection System

Developed a backend pipeline to detect manipulated media with machine learning models.

- Created REST APIs using Flask for model inference
- Carried out dataset preprocessing and integrated models
- Designed system flow for handling real-time predictions

Quantum-Proof Systems Scanner

Developed a cybersecurity platform for assessing Post-Quantum Cryptography readiness of public-facing systems.

- Implemented TLS and certificate analysis modules
- Evaluated cryptographic posture against PQC requirements
- Generated cybersecurity reports and risk assessments
- Built using Django, Python, Bootstrap and SQLite

SKILLS

Backend Development: Python, Django, Flask, REST APIs

Database: MySQL, PostgreSQL

Programming: Python, C, C++, JavaScript

Tools & Platforms: Git, Linux, Docker

Concepts: Authentication Systems, API Design, Database Design, Basic System Security

ACHIEVEMENTS

- Selected for DEF CON Srinagar 0x0 cybersecurity event
 - Served as School Captain and House Captain
 - Hosted and coordinated multiple school events
 - Selected into Jawahar Navodaya Vidyalaya (JNV) on merit basis
 - Recognized on LinkedIn for cybersecurity-related projects and contributions
-

ADDITIONAL INFORMATION

Interests: Backend Development, System Design, Cybersecurity

Strengths: Problem-solving, quick learning, team collaboration
